Pythia-14M · final raw-gradient norm relative to its minimum

Metric: $\|g_{712}\| / \min_{1 \le t \le 712} \|g_t\|$; raw gradients before clipping, no smoothing.

Final update712 is the partial batch: 311 sequences versus 1,024. The minimum uses all 712 updates.

One seed1234; hardware differs across groups. Lines connect observed points; no fit or sampling uncertainty estimate.
