08-Sep-2026

Dear Mr. Mattar:

We write you in regards to manuscript # TNNLS-2026-P-48775 entitled "Constructive and Destructive Training Regimes: A Framework for Interpreting SGD Stability" which you submitted to the IEEE Transactions on Neural Networks and Learning Systems.

In view of the criticisms in the review(s) found at the bottom of this letter and based on the recommendation of the Associate Editor/Senior Editor, your manuscript has been denied publication in the IEEE Transactions on Neural Networks and Learning Systems.

We do not accept the majority of submissions we receive because TNNLS is very selective. Only the manuscripts found to be of truly high quality with clearly significant contributions (to neural networks and the related learning systems) will be further considered for possible publication by the journal. Please do not submit a revised version of this paper in the future, as this decision should be considered as final. Also, due to the large number of manuscripts we receive, we are unable to enter into any further correspondence regarding this decision.

We sincerely regret my inability to recommend the publication of your work. The Transactions receives a large number of submissions and the resulting standards are quite high. I hope that you will be able to use the reviews to enhance your future efforts.

Thank you for considering the IEEE Transactions on Neural Networks and Learning Systems for the publication of your research. We hope the outcome of this specific submission will not discourage you from the submission of future manuscripts.

Sincerely,

Editorial Office
IEEE Transactions on Neural Networks and Learning Systems

Recommended Decision by Associate Editor: Recommendation #1: Reject

Recommendation #2: Reject

Comments to Author(s) by Associate Editor:
Senior Editor: 1
Comments to the Author:
Senior Editor:

On the basis of the associate editor and reviews, our evaluation is that the paper cannot be accepted for publication in IEEE TNNLS. The reason for the decision is that the associate editor and reviewers considered the results of the paper seem to be with insufficient value.

Associate Editor: 2
Comments to the Author:
This paper studies the stability of the SGD trajectory. While this analysis provides some insights on the behavior of SGD, there are some issues in the submission. For example, the main contributions study the norm of SGD iterations, and both reviewers do not see how this is related to the stability of SGD. There is not a sufficient justification of this norm on stability. Furthermore, there are some missing discussions on the existing studies on the norm control of SGD iterations. The analyses also impose restrictive assumptions on the correlation of gradients, which may not hold in practice. I hope these comments would be useful for the authors to improve their paper.

Bom dia!

Vamos tirar proveito das revisões, que foram boas, refletir sobre elas, gerar nova versão ASAP e resubmeter, talvez para a PAMI. O fato de o paper ter caminhado na revisão e termos este nível de interação com revisores acho que foi um avanço.

Até

Pelo que vi, básicamente um considera que o artigo precisa definir melhor o conceito de estabilidade, justificar a ligação com a norma dos parâmetros, apoiar empiricamente as hipóteses e moderar afirmações sobre diagnósticos de mini-batch. E o outro acha que a análise é limitada, com suposições fortes e sem comparação suficiente com trabalhos relacionados.

É por aí mesmo, Fred. Eu e o Thiago conversamos ontem. Estamos fechando um artigo para o ICLR até dia 24/09. Em seguida, daremos prioridade às correções desse artigo para ressubmissão.
Braga, Thiago concordou em alocar um aluno para dar sequência ao paper do Path. Vcs têm alguém em mente ou posso buscar alguém na disciplina de IA?

att.

Vamos tentar um aluno que já esteja no embalo aqui no LITC. Vou olhar aqui e dar um retorno.
