Pythia-14M on DGX Spark: higher learning rates

Matched initialization/order/recipe; new LR 0.02 and 0.04; completed LR 0.01 reference

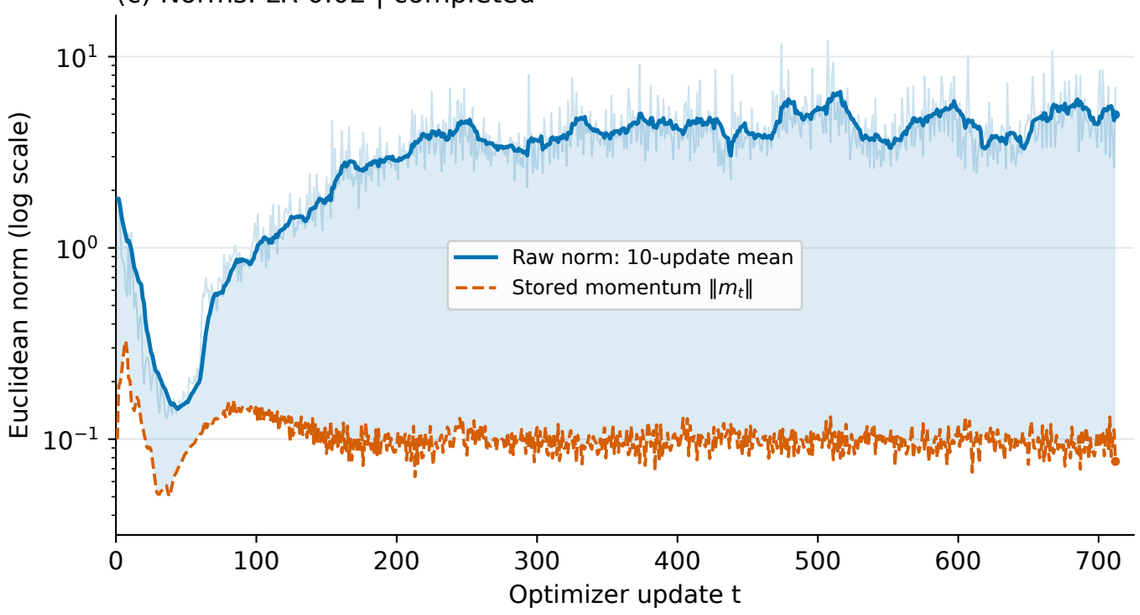

(a) Unsmoothed training loss

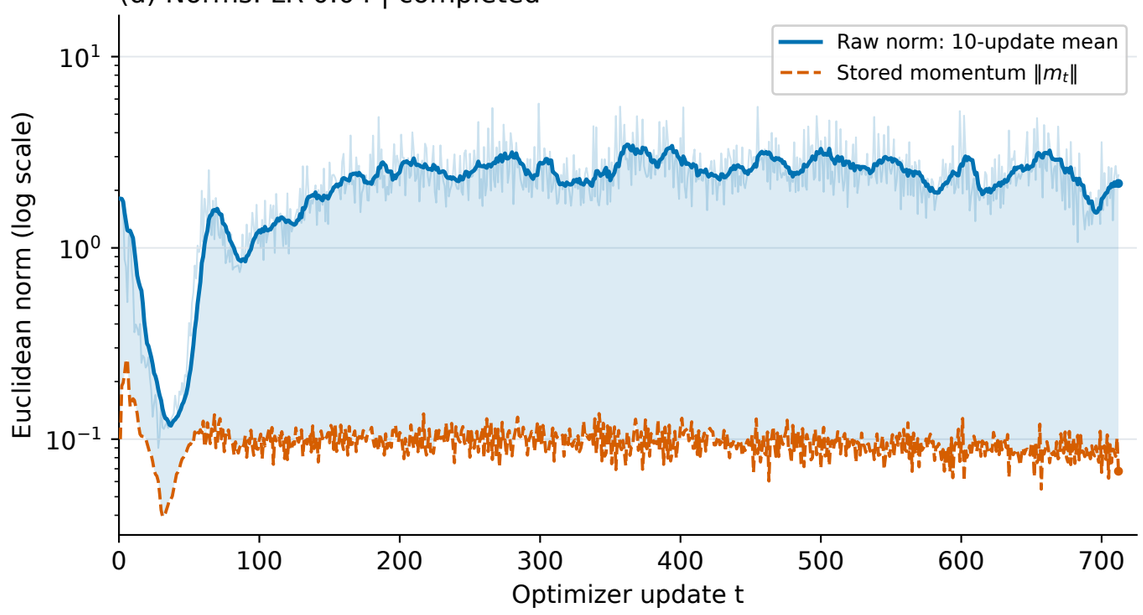

(b) Norms: LR 0.01 | reference

(c) Norms: LR 0.02 | completed

(d) Norms: LR 0.04 | completed

Loss and momentum norms are unsmoothed. Norm panels: faint raw values, trailing 10-update raw mean, fill to momentum (not uncertainty).

Every recorded accepted update is shown; circles mark partial final update 712 (311 sequences versus 1,024). Failed prefixes are labeled.

Means use current and preceding 9 available raw norms, before log display. Common log Y limits; no normalization or positive floor.

Raw g is pre-clipping; m is uncorrected Adam exp_avg from clipped g; d excludes LR/decay. One seed; no stability or causal alignment claim.
